

GUTTER PROTECTION SYSTEM

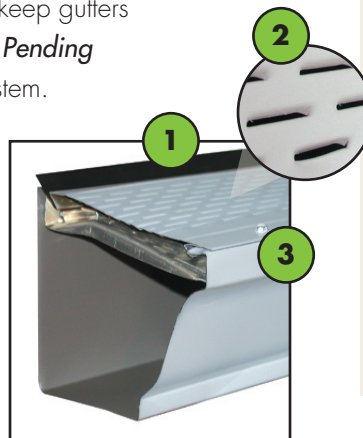

integrity gutter protection

For Systems That Keep Gutters Free From Debris

Now there's an even better way to keep gutters clean and free-flowing...The *Patent Pending* Clean-Sweep™ Gutter Protection System.

1 - The back of the profile features a rubber based insert that is set at 45° angle to sit on top of the hangers for added support and to ensure positive drainage. The rubber is impervious to the damaging effects of hot and cold temperatures, which means it will not rot or become brittle.

2 - Opening width allows maximum rain water flow.

3 - A longer front lip is available that extends beyond the gutter to help prevent "tiger striping".

The drop in system does not lay beneath the shingles, which means it will never jeopardize the integrity of the roof or its structure.

- . Prevents debris from clogging gutters and downspouts
- . An easy to install low profile design for an attractive, clean look
- . Deters water run-off that can damage a home's exterior and foundation
- . Helps protect gutters from winter ice dams
- . 5 Beautiful standard colors: Clay, Wicker, White, Brown and Black. Additional colors available upon request.
